Customer since

**2023**

Longroad Energy develops and operates utility-scale wind, solar and battery projects across the United States, delivering clean energy in remote and demanding environments. Their teams work around high-voltage systems, elevated structures and shifting weather, where disciplined practices and a commitment to caring for both people and land are essential to responsible renewable energy operations.

---

As the company's footprint expanded and its stewardship responsibilities grew, leadership recognized the importance of giving field teams tools that reflect the realities of their work. They began looking for a way to

strengthen consistency, encourage participation and support practices that can continue to scale alongside their long-term goals in sustainability and environmental care.

# Challenges

Longroad Energy operates wind, solar and battery sites in remote regions where teams work at height, around high-voltage equipment and in rapidly changing weather

conditions. The work is fast-moving and highly technical, requiring precise coordination and timely reporting to keep people safe and assets running reliably.

“ If workers in the field or the office don't want to use your EHS system because it's cumbersome, you're not going to have the data for important safety reports. Ultimately, a lack of EHS and ESG reporting contributes to a less safe environment for everyone.

Ryan Fonbuena  
VP of EHS

Often, leaders must manage risk and performance without real-time connectivity, making it challenging to track issues consistently, follow through on corrective actions, stay ahead of emerging hazards and

responsibly steward the environment and its people. Together, these factors create a need for clarity, consistency and accessible reporting.

“ There are a lot of physical hazards that present safety risks to our employees working with renewable energies. With wind turbines where you're 300 feet or higher up in the air, know, that's a long way from help.

Ryan Fonbuena  
VP of EHS

## Before Evotix

Before adopting Evotix, Longroad Energy relied on an EHS and ESG system that was difficult for field teams to use and not designed for the mobile devices technicians depend on in remote renewable

environments. The system struggled to gain real buy-in from employees and contractors, leading to inconsistent visibility into incidents, near misses and audit findings.

## After Evotix

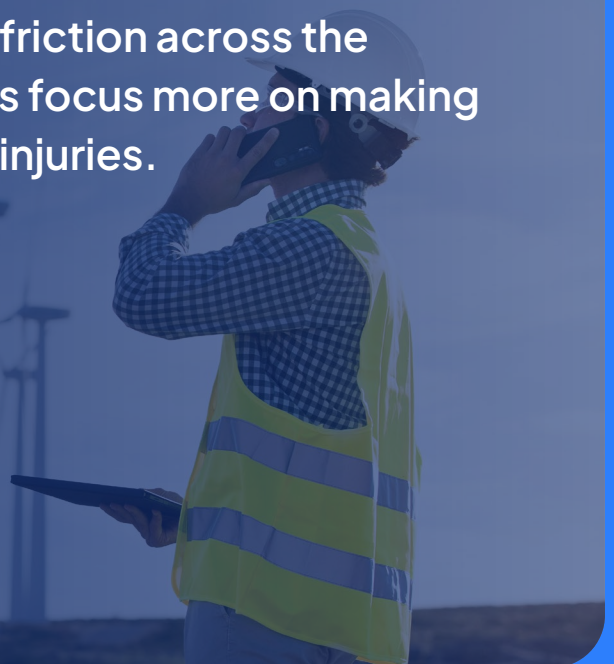

By adopting Evotix, Longroad gained a system that supports the pace and complexity of renewable-energy work. Field teams can now capture information directly from their mobile devices, even in remote locations without connectivity, creating a more

immediate link between on-site activity and operational oversight. Reporting is more consistent across projects, giving leaders clearer insight into what's happening and enabling smoother coordination across dispersed sites.

“ Evotix has removed a lot of friction across the organization, which helps us focus more on making improvements that reduce injuries.

Ryan Fonbuena  
VP of EHS

# The Outcome

## Higher frontline engagement

Evotix helped Longroad Energy strengthen how information flows from its remote renewable sites, leading to noticeably higher engagement from field teams. Technicians now participate more actively in reporting, creating a richer stream of observations, good catches and insights from locations where visibility was previously limited. This increased participation ensures that potential issues surface earlier and that learnings can be shared more widely across the business.

## Stronger follow-through on corrective actions

Clearer, simpler workflows have made a measurable difference in how corrective actions are handled. With defined ownership and structured follow-through, important actions are now easier to capture, assign and close out. This reduces the likelihood of repeat issues and helps keep operations moving safely and efficiently. Teams across sites can stay aligned on what needs to happen, when it needs to happen, and who is responsible.

## Real-time visibility for leaders

Executives and managers rely on up-to-date Evotix dashboards to review trends and compare performance across projects and locations. This real-time visibility replaces the fragmentation of the past, allowing decision-makers to act faster and with greater confidence, supported by a consistent set of shared insights.

## More unified EHS and ESG efforts

Standardized forms and centralized reporting allow incident, near-miss, audit and environmental data to be viewed together. This has allowed Longroad Energy to strengthen its stewardship initiatives and embed responsible waste disposal and recycling practices directly into its renewable processes. This alignment supports more unified EHS and ESG practices and reinforces Longroad's commitment to responsible operations across every site.

**2x**

more good catches than any other incident type

**100%**

of employees are able to use Evotix, driving full participation across wind, solar and battery sites

**Real-time**

visibility that executives, board members and managers use to identify trends and guide decision-making across sites

” At Longroad, I'm proud to say that every employee uses Evotix, from the field to the office. It's hands down the best system we've used for reporting incidents, near misses, and good catches.

Ryan Fonbuena  
VP of EHS

## Why Evotix?

Evotix met Longroad Energy's most important needs: a system that technicians find accessible, mobile and offline functionality suited to remote renewable sites and a platform flexible enough to evolve with their EHS and ESG priorities. The ease of use is a standout factor - field teams could finally report directly

from their phones or tablets without delays or friction.

Leadership also valued Evotix's configurability and responsiveness, giving them confidence the platform could adapt as their operations, technologies and stewardship responsibilities continue to grow.

## To date, Evotix has helped Longroad:

Increase engagement by enabling accessible, mobile-first reporting across remote, high-risk sites

Improve consistency with standardized forms for incidents, near misses, audits and environmental stewardship activities

Strengthen alignment between EHS and ESG by bringing safety and environmental data into a unified system

Enhance leadership visibility with real-time dashboards used in executive and contractor discussions

“ Investing in Evotix is one of those decisions where you look back and wonder why you didn't do it sooner. The product is easy for end users, flexible enough to let you build forms from templates or from scratch, and simple to update and adapt as your needs change. I haven't used another product that compares.

Ryan Fonbuena  
VP of EHS

## What's Ahead

Longroad Energy is focused on strengthening the connection between EHS and ESG by bringing more environmental, waste and recycling data directly into Evotix. A key priority is reducing friction for field teams and making sustainability information easier for reporting groups to access. The team also plans to streamline compliance by generating OSHA 300 and 300A logs directly through the platform.

By simplifying reporting and unifying more processes in one place, Longroad Energy aims to make safety and stewardship easier for employees across wind, solar and battery sites. These efforts reflect a long-term commitment to continuous improvement, helping teams spend less time gathering data and more time supporting safe, responsible renewable operations.

[contact@evotix.com](mailto:contact@evotix.com)

Evotix is a global leader in environmental, health, safety and sustainability (EHS&S) software solutions for midsize and enterprise markets. With more than 25 years of experience and a global team of EHS&S experts, Evotix serves more than 800 customers worldwide across industries. Evotix's all-in-one, no-code platform centralizes incident management, audits, inspections and risk mitigation, automating workflows and digitizing procedures to enhance regulatory compliance and data management.

Evotix's mobile app provides workers with on-the-go training and safety guidelines to ensure they receive health, safety and sustainability information anytime, anywhere.
